HYOSCYAMINE SULFATE (LEVSIN) TABLETS

This medication is used to reduce or help prevent tracheal (throat) congestion. You will be giving these tablets under the tongue, and they will absorb through the oral tissues (mouth).

The tablet should be crushed into a powder. Add 2 or 3 drops of water to the powder and mix until the powder is dissolved. The liquid can then be placed under your loved one's tongue. Your nurse can demonstrate this for you. Hyosycamine is usually given every six hours as needed to control tracheal congestion (according to the doctor's orders).

If you have any questions relating to this, or any medication, please do not hesitate to call us; day or night at 262-652-4400 or 800-830-8344.
